## Number system

1. Program to calculate the binary, octal, and hexadecimal equivalent of a given natural number entered from the keyboard.
2. Program that converts a number written in a numeral system with an arbitrary base **p** to decimal (the base **p** and the digits of the number in base **p** are read from the keyboard).
3. Program that converts an integer from base **p** to base **q** (the bases **p** and **q**, as well as the digits of the number in base **p**, are read from the keyboard).
4. Program that converts characters from the ASCII table to decimal and calculates the sum of the entered character string.
